References

This reference list of over 5,800 entries is sorted alphabetically using the same conventions as those used in the *Australian Atlas*. Single-author references are sorted first by surname, second by the author's full initials and, third, by year of publication. Where there are two co-authors, sorting follows the order ‘first author, second author, year’. Where there are three or more co-authors, references in the text are in the form ‘Author et al. 2002’. So that such references can be more readily located, they are listed by first author and year, with the names of second and subsequent authors, which the reader would not know until consulting this list, given lower priority in the sorting process. Wherever possible all publications by the same author have been grouped and correctly sorted even when the author has used more than one set of initials.

The editors believe that this reference list is the most comprehensive ever published on Scottish birds and that it is a valuable resource and research tool. It includes a near-complete listing of papers from *Annals of Scottish Natural History, Scottish Naturalist* and *Scottish Birds* together with those selected by the species author. References for the introductory sections are listed at the end of each chapter. A digital copy of this reference list is available for download from the website www.soc.org.uk.

Frequently-mentioned references are abbreviated and italicised in the text (e.g. *BEO*) and these are listed immediately after the editors’ preface.
